### **Clinic Hours:**

Monday to Friday 9:00 am to 5:00 pm

Closed between 12:00pm and 1:00pm

### Who We Are

First Place Clinic & Regional Resource Centre is a program within CMHA Thunder Bay Branch. We are an early psychosis intervention program that offers assessment and if appropriate, treatment services to young people between the ages of 14 and 35 who are experiencing recent, very specific changes in thinking, mood and perception. These changes can contribute to feelings of confusion and make it difficult to know the difference between what is real and not real.

Our services are confidential, voluntary, and in a community based setting. We encourage you to bring family with you for assistance and support. Our philosophy is one of hope and recovery.

#### First Place offers:

- a low key, warm and friendly place to meet in the community
- professionals who care and have expertise in working with people who are experiencing psychosis
- confidential services
- education and support to get better and stay better
- education and support for family and friends.

There is no cost to clients; services are funded by the Ministry of Health & Long-Term Care. A valid health card must be brought to every appointment.

### Further Assessment

As we work together and get to know your situation better, our team will gain a better understanding of your experience with psychosis. This happens over time.

Sometimes the team needs extra information to help understand you better and will recommend you participate in additional assessments. This may include specific medical check-ups and/or a variety of medical tests. We will work with you to complete these specialized tests. The information from these tests helps the team to better know how your brain learns, processes information, and impacts your behaviour.

### Your Time With First Place

Clients are usually involved with First Place for approximately three years. However, this could vary as the recovery process/journey is different for each person. We will continue to work with you as long as there are shared goals. When the goals are accomplished we can help plan for any follow up services you need.

## Our Team

Our team includes Registered Nurses, Family Care Coordinators, Recovery Care Coordinators, Nurse Practitioner, psychotherapy services, and a Clinical/Administrative Assistant. We follow a team approach to assessment and treatment which means we work together to help you. We will work with you identifying your roles and responsibilities and those of staff.

## Coming to Appointments

We always see people by appointment. In the beginning, your nurse will want to see you approximately once a week. The nurse is your “go to person” – the person you call when you have questions and the person who will help coordinate your care.

Your family will be assigned their own family care coordinator who is their “go to person”. Your family is encouraged to meet with the family care coordinator for education about the illness, recovery, and for their own support.

## Recovery Care

Recovery planning is developed with you and your recovery care coordinator. Recovery planning is about deciding on the steps you will take to get better and stay better. It also involves working on personal life goals such as, goals with school, work, and social life. An example may be, to return to school. Recovery steps might include figuring out what kind of a work load you can manage, discussing what supports might be helpful, and linking you to those supports. When there are “bumps” on the road to recovery, as there sometimes are, we will have honest discussions and hopefully you will let us work with you to get over the bumps and on to a smoother road.

## Working Together

Periodically, you, your family, and the treatment team will meet as a group to share information, check-in or problem solve when stressors come up, or plans and goals need to be re-visited. Other times, if you are working with other agencies or professionals in the community and there is a need to share information, we can also get together. We call these partnership meetings. Over time, as things get better for you and your family, appointments will be shorter and spaced further apart i.e., once a week and then once every couple of weeks and then once a month, etc. If you go through rough patches and let us know, we can see you more often to help you through the rough patches. We can also help make referrals to other community programs if wanted or needed.
